Sai Sumanth Moparthi

SOC Analyst | Cloud Security Analyst | Internship or Full-Time Role (2027)

Paris, France | +33 7 80 85 65 49 | saisumanth2024@gmail.com

Portfolio: portfolio-three-smoky-45.vercel.app | linkedin.com/in/sumanth123 | github.com/Sumanth718

Work status: Master's student at ESILV Paris, eligible for an internship agreement (convention de stage)

SUMMARY

Cybersecurity and Cloud Computing Master's student at ESILV Paris (graduating May 2027) with 1+ year of SOC and security operations experience. Triaged 40–60 Splunk alerts daily, cut false positives by ~25% through detection tuning, and removed 300+ excessive accounts for a global banking client. Builds open-source AWS security tooling in Python and Terraform.

TECHNICAL SKILLS

- **Security Operations:** Splunk SIEM, alert triage, incident response, log analysis, detection tuning, phishing and malware analysis, MITRE ATT&CK, Microsoft Defender for Endpoint (EDR)
- **Cloud Security (AWS):** IAM, CloudTrail, GuardDuty, CloudWatch, VPC, EC2, S3, security groups, CIS AWS Foundations Benchmark, Terraform, GitHub Actions
- **Vulnerability & Access Management:** Nessus, remediation tracking, Active Directory, access reviews, least privilege
- **Scripting & Frameworks:** Python (Boto3, Pytest), PowerShell, Bash, SQL, Linux; ISO 27001, NIST CSF, ITIL

EXPERIENCE

Security Analyst Intern | GradeSpot IT Solutions | Hyderabad, India (Remote) | Apr 2026 – Aug 2026

- Triaged 40–60 Splunk SIEM alerts per day, separating true positives from noise and escalating confirmed incidents per runbooks.
- Investigated phishing, suspicious logins, and malware alerts with Microsoft Defender for Endpoint (EDR), email gateway logs, and VirusTotal, mapping activity to MITRE ATT&CK.
- Tuned 10+ detection rules, reducing false positives by ~25%; ran Nessus scans across 200+ assets and tracked remediation with system owners.
- Documented investigations in Jira and contributed to weekly security reports.

System Security Analyst | Infosys | Hyderabad, India | Aug 2024 – May 2025

- Analyzed system, firewall, and authentication logs for a global banking client, escalating suspicious activity and policy violations to the L2 SOC.
- Ran quarterly access reviews across Active Directory and 15+ business applications, removing 300+ unused or excessive accounts (least privilege, ISO 27001).
- Tracked remediation of critical and high vulnerabilities to meet SLA targets, following ITIL incident and change management.
- Automated log collection and reporting with Python and PowerShell, saving ~5 hours per week.

AWS Cloud Engineering Intern | Andhra Pradesh State Skill Development Corporation (APSSDC) | India (Remote) | May 2023 – Sep 2023

- Deployed EC2, S3, VPC, RDS, and Elastic Load Balancing workloads following AWS Well-Architected practices.
- Built least-privilege IAM roles and policies, enabled MFA and CloudTrail auditing, and segmented traffic with security groups, NACLs, and public/private subnets.
- Configured CloudWatch alarms for resource health and unusual activity.

PROJECTS (OPEN SOURCE)

AWS Security Scanner | Python, Boto3, Pytest, GitHub Actions | github.com/Sumanth718/aws-security-scanner

- Audits AWS accounts against the CIS AWS Foundations Benchmark v3.0 with 21 read-only checks across IAM, S3, EC2, VPC, CloudTrail, and GuardDuty.
- Scores security posture and generates HTML, JSON, and CSV reports with remediation guidance; includes a credential-free demo mode, Pytest suite, and CI.

SOC Detection Engine | Python, YAML rules, Pytest, GitHub Actions | github.com/Sumanth718/soc-detection-engine

- Normalizes Linux auth.log and AWS CloudTrail events and applies YAML detection rules for SSH brute force, privilege escalation, IAM abuse, CloudTrail/GuardDuty tampering, and public S3 buckets.
- Validated with 23 passing Pytest tests and CI on Python 3.10 and 3.12, using a synthetic security-event generator.

AWS Secure Baseline | Terraform, GitHub Actions, Docker | github.com/Sumanth718/aws-secure-baseline

- Terraform modules for networking, logging, encryption, account security, and threat detection, with automated validation in a GitHub Actions CI/CD pipeline.

EDUCATION

Master's, Cybersecurity and Cloud Computing | ESILV – École Supérieure d'Ingénieurs Léonard de Vinci, Paris | Sep 2025 – May 2027 (expected)

B.Tech, Cybersecurity | Godavari Institute of Engineering & Technology (GIET), India | Aug 2021 – May 2024

TRAINING & LANGUAGES

Training: Introduction to Cybersecurity – Cisco Networking Academy (2023); Cyber Security Management Virtual Program – Forage (2023)

Languages: French (A1) | English (Full Professional) | Hindi (Professional Working) | Telugu (Native)
